

# ENTact™

## Septal Stapler

### **Designed to:**

- *Offer a more efficient septal flap closure*
- *Enable easy manipulation of flap edges*
- *Provide functional support for 1 week*

# ENTact<sup>+</sup>

Current techniques in septoplasty involve placing simple splints and sutures to approximate septal flaps created during surgery. However, suturing within the confines of the narrow and deep nasal passageway can be an arduous and time-consuming task for even the most experienced surgeon.

A novel solution has been developed to address this challenge: resorbable implants delivered via an ergonomic, single-use stapler system that supplements the need to suture. Using the ENTact septal stapler, surgeons can typically achieve approximation in less than a minute.<sup>1</sup> Overall, use of the ENTact stapler reduces OR time, minimises damage to surrounding tissues and helps surgeons achieve more consistent results.

## Approximating the Septal Flaps

The following endoscopic images demonstrate use of the ENTact septal stapler.

Stapling the septal flaps

Implants viewed immediately after implantation

One week postoperative view of implants

## Features

### Designed to:

- Offer a proficient alternative for septal flap closure.<sup>1</sup>
- Promote efficiency in procedures as approximation is typically achieved in less than 60 seconds.<sup>1</sup>
- Provide functional support for at least one week.
- Enable easy manipulation of flap edges prior to stapling.
- Offer versatility; implants can be placed through cartilage or soft tissue grafts.

## Ordering Information

Part Number	Description
601-00100	ENTact Septal Stapler, 3 Pack
601-00100S	ENTact Septal Stapler, 1 Pack
