

EndoFLEX System

Mobile. Ergonomical. User-friendly. Flexible.

See more than others.

Easily manoeuvrable, the EndoFLEX is ideal for flexible endoscopy and swallowing diagnostics applications anywhere in the hospital.

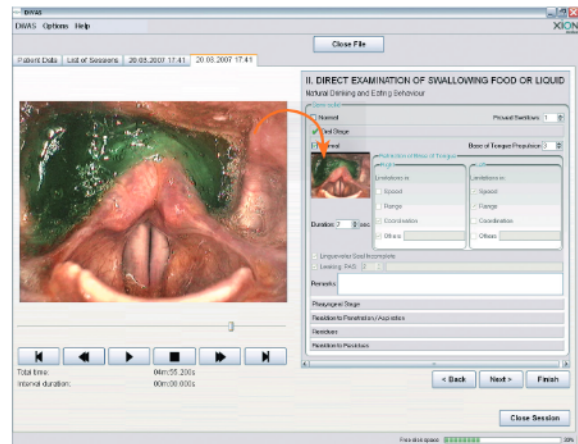

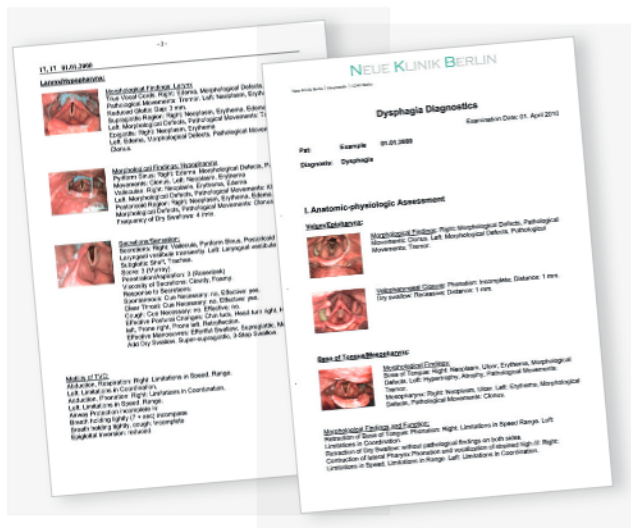

Video Nasopharyngoscope EV-NC

The ergonomic video nasopharyngoscope EV-NC not only fits better in the users hand, but makes the examination easier for all involved. With an integrated camera and light source in its handle, it is easy to use and transport; with a tube diameter of only 3.5 mm, the examination is less stressful for the patient. The sterilizable tubular facilitates transportation of the sterile endoscope to the patient and safe return of the contaminated endoscope after its application.

DiVAS Software

The design and user-friendly software optimize the entire workflow: The number of control steps are reduced to a minimum, patient data is easy to manage. All video, image, audio and measurement data are recorded, archived and evaluated. Documentations such as medical reports can be generated automatically.

Everything from one source: Endoscopy systems since 1991

XION develops and manufactures devices, endoscopes and instruments for the minimal invasive diagnostics and therapy. In close cooperation with leading hospitals, XION creates practical and user-friendly system solutions.
