NoseFit®

External Nasal Splint

NoseFit, Orfit's external nose splint, provides immobilization and stabilization after various nose injuries, different types of nose surgeries and other conditions requiring nose and nose bridge stabilization. Its ergonomic and unique design ensures a comfortable fit, making it suitable for individuals of all ages and lifestyles.

The material allows air circulation between the nose and the splint. A good air flow results into less sweating and less skin irritation. NoseFit also feels extremely soft to the touch in comparison with other nasal splints.

Would you like to offer your patients a comfortable post-op splint? Would you like to work with a product that is easy to apply and that speeds up your workflow?

Contact us for more information about this brand-new product.
